THE
GALLERY
COLLECTION

COMBINING SUPREME
CRAFTSMANSHIP QUALITY
MATERIALS & ELEGANCE

in Design

The Gallery Collection presents an extensive range of traditional and contemporary fireplaces and stoves. Built on almost 70 years of experience in the fireplace industry we combine supreme craftsmanship, quality materials and elegance in design.

Our desire is to provide you with a superb choice of fireplaces skilfully made with high quality materials, all fitted in your home by reputable retailers so you can enjoy the experience of buying and owning your own individual fireplace.

The fireplace suites and fires within the collection represent classic fireplace designs, some infused with a contemporary twist, aimed to complement a variety of interior styles. Many designs are available in a variety of stone finishes including Portuguese limestone, Micro marble, Granite, or Jurastone, all capable of combining with our extensive range of gas and electric fires, casts, baskets and stoves.

The Gallery Collection offers a unique selection of natural stone mantels and quality cast iron fireplace options including inserts, fascias and fire baskets, as well as a wide selection of more traditional cast iron combination fireplaces. Our range will allow you to burn a variety of fuels, there is something for everyone and even the choice to install one of our modern life like electric fires appliances.

We are delighted to include a selection of Ecodesign Ready, SIA approved stoves to the collection alongside a range of stoves suitable for many scenarios and fuel types such as wood, gas or multi-fuel. You will find stoves with a variety of heat outputs ranging from 4.6kW to 12kW and with efficiencies of up to 83%.

AGEAN LIMESTONE

PORTUGUESE LIMESTONE

PERSIAN LIMESTONE

Limestone

This natural, sedimentary limestone formed over 50 million years ago is cut straight from the earth. Portuguese Limestone features characteristic darker veins on a light background, intermingled with fossils of plants and animal life, all adding to the beauty and individuality of this great material. In contrast Agean Limestone is a much whiter limestone with a soft, speckled grain, which works well in a variety of settings.

Persian Limestone, a darker, grey toned version of the much loved Agean Limestone has the rare feature of appealing to both traditional and contemporary tastes. Whether creating a bold mantel centrepiece or adding some flair to a modern architectural piece, this unique material is guaranteed to catch the eye.

Jurastone

Jurastone is natural material which utilises an innovative finishing technique, it is made from sheets of natural solid marble and coated with one of two great finishes.

You can choose from smooth Cotswold and the slightly textured Chiltern, both finishes give a consistent appearance of stone.

CHILTERN

COTSWOLD

CARRARA MARBLE

GRANITE

MARBLE & Granite

Each of these beautiful stone finishes has their own features that help to create a truly unique fireplace, luxurious and naturally detailed. Each of our Carrara marble mantels have their own distinctive white appearance with grey or grey blue veining, with our granite mantels featuring veins, patches of colour & crystals, combined in a design that was planned by nature millions of years ago.

MICRO *Marble*

This exquisite material offers a more uniform detail without the swirls and veins found in traditional marble fireplaces. As an alternative, micro marble offers a consistent, even tone and a durable, polished finish.

Arctic White is a vivid shade of white with the slightest hint of grey speckling that adds to an intriguing sense of depth.

ARCTIC WHITE

VENEERED OAK

NATURAL PINE

NATURAL OAK

CHATSWORTH GREY

Natural wood & VENEER

The Gallery Collection offers a wide choice of high quality oak veneered and solid wood mantels.

Our traditionally styled mantels are intricately designed and work well in period styled homes.

The collection also features a number of veneered mantels some featuring recessed twin spot lights which work well in contemporary settings.

Cast IRON

All our cast iron products are manufactured to the highest standards in ISO 2002 accredited facilities.

The quality and attention to detail is second to none. Not only is the casting quality first class, the finishing processes are carried out by highly trained craftsmen.

Many products are available with a finish of your choice in matt black, highlight polished or fully polished.

FULL POLISHED

TRADITIONAL

BLACK

HIGHLIGHT

The Fireplace Suites & Fires within this brochure represent classic fireplace designs, some infused with a contemporary twist, aimed to complement a variety of interior styles.

When planning your fireplace, the Gallery Collection has a variety of materials to choose from, depending on what look you are trying to achieve.

All of the suites work in combination with our extensive range of fires including our higher performing gas fires range. The collection also includes a large range of gas and electric fires.

We hope this wide choice will allow you to select the perfect fireplace to suit your own particular taste. We have pictured each suite design in a variety of options to demonstrate some of the many different combinations that can be achieved. A suite consists of the mantel, back panel and hearth.

Most suites in this brochure (with the exception of the models fitted with feature lighting) can be fitted against a flat wall without a chimney, if chosen with a suitable electric fire. All that is required is a power point. We have generally shown the suites with gas and electric fire options.

Fireplace MANTELS

The Gallery Collection presents a unique selection of natural stone mantels and quality cast iron fireplace options including inserts, fascias and fire baskets, as well as a wide selection of more traditional cast iron combination fireplaces.

We are also very proud to feature our range of higher performing cast iron inserts, with the balanced flue option boasting efficiencies of up to 84%. These authentically styled inserts benefit from all the aesthetic qualities common with traditional fireplaces, combined with the eco-friendly higher efficiencies of gas convector fires.

Generally a fireplace would comprise of separately selected items carefully chosen by you to create a truly unique focal point for your living space. These items include a mantel, a hearth, an insert or chamber and a fire source. The fire may come from a number of options such as gas, solid fuel or electric. There's also the option of using a fire basket or fascia/inset gas fire combination allowing many thousands of permutations. If your preferred combination of products are not shown, it does not mean they do not work together.

Also incorporated into this section are cast iron fascias. These don't feature the full depth of an insert and are combined with an inset gas fire, a range of which can be found on page 47.

Fireplace

COMBINATIONS

As the name suggests, a combination fireplace is a cast iron centre piece that combines many aspects of a traditional fireplace in one package. All you need to choose is your preferred fuel type and add a hearth.

All combination models have the option of solid fuel or gas, but we also offer the option of electric fires in selected models. As with other cast iron products, all are suitable for burning solid fuel, however polished and highlighted products may tarnish. When burning solid fuel it is recommended that you choose a black finish. For more information on each of our combination fireplace's available finishes and fuel suitability see the table on page 103.

Introducing the NEW Gallery inset electric fire featuring our latest innovative multi-colour way flame technology. This versatile appliance has an impressive range of up to 2kW heat output and is available with a range of contemporary and traditional trims to choose from. The appliance comes with 4 interchangeable fuel beds allowing you to swap them as your tastes change. For a more traditional look you can use the coals or logs or for a contemporary feel you can use the pebbles or crystals.

The UK designed appliance is fully ERP compliant and is supplied with an infrared remote with LCD display with a friendly interface allowing all the settings available easy to understand and function. The fire has been designed with optimal controllability enabling you to switch quickly and simply from heat to flame effect. The remote features a fully programmable timer designed to provide automatic time and temperature control over a 7 day period.

- Infrared remote control with LCD display
- Four different fuel beds – logs, coals, pebbles, crystals
- RGB colour changing flame effect and fuel bed
- Thermostatic control
- 7-day programmable timer

Cast Iron

INSERTS

A cast iron insert is a decorative plate with complimentary front bars that can incorporate an appliance should you so wish, or can be left purely as a decorative feature. They are typically in the design of an arch or a vertically tiled section either side of the opening. They are also compatible with several fuel types, including wood, coal, gas or electric. With the exception of the higher performing range and any chrome finishes, all of the inserts featured in this brochure are suitable for burning multiple fuels, for example wood and coal, however polished and highlighted products may tarnish. When burning solid fuel it is recommended that you choose a black finish, for more information on each of our inserts available finishes and fuel suitability see the table on page 94. When choosing a tiled insert it's possible for you to select any tile set from our range which can be found on page 50.

OUR CAST IRON

All our products are manufactured to the highest standards in ISO 2002 accredited facilities. The quality and detail shown here is second to none. Not only is the casting quality first class, the finishing processes are carried out by highly trained craftsmen. This helps us to achieve a consistent and unrivalled offering to our valued customers.

Higher Performance CAST IRON INSERTS

The Gallery Collection proudly features a range of higher performing cast iron inserts. These design-led fireplaces have taken the styling of the traditional insert and combined it with modern, patented gas fires to produce one of the most authentic looking products of its type currently available. Each insert style comes with the option of 3 different fire types to suit most chimney scenarios and features efficiencies of up to 84%.

INSERTS

Cast Iron facias, inserts or back panels have evolved over time and they are able to be used with gas or electric fires to offer the look of a traditional fireplace. There is also the option to use with an high efficiency inset gas appliance for more heat and greater efficiency. There is also the additional choice of an electric inset fire and they can also be used for solid fuel with a clay back which would include a finishing trim and fret complete with an ash pan cover.

Baskets

Fire baskets are an eye catching addition to any fireplace with options for solid fuel (wood, coal), gas, and electric. All our fire baskets are suitable for burning solid fuel, however polished and highlighted products may tarnish. When burning solid fuel it is recommended that you choose a black finish. For more information on our fire baskets, including finishes and fuel suitability please see page 104.

In most scenarios it will be necessary to fit a chamber, slip set and back panel with your fireplace. Within this section we have a variety of such items in many finishes for you to choose from.

The Gallery Collection presents an extensive range of traditional and contemporary stoves, combining supreme craftsmanship, quality materials and elegance in design. There's nothing quite like the feeling invoked by the comforting glow and warmth of a cast iron stove. Our desire is to provide you with a superb choice of high performance, efficient stoves that are skilfully made with high quality materials.

There are many factors and considerations that will determine which stove is ideally suited to take pride and place in your home. Featured within this brochure are a range of stoves suitable for many build applications, with a host of fuel options, including wood, gas or multifuel. Our choice of stoves boast a variety of heat outputs ranging from 4.6kW to 12kW and with great efficiencies of up to 83%.

A multifuel stove has many similar characteristics to a wood-burning stove in appearance and design. Multifuel, in essence refers to the burning capability of the stove, therefore the permitted fuels you are able to use would include wood, smokeless coal, wood pellets or peat. Burning house coal is not permitted and could cause damage to your appliance due to the higher temperature of which it burns.

Many parts of the UK are smoke control areas where you cannot emit smoke from a chimney unless you're burning an authorised fuel or using 'exempt appliances'. In a smoke control area you can only burn fuel on the list of authorised fuels, or any of the following 'smokeless' fuels as mentioned below, unless you're using an exempt appliance. All of which need to be in accordance with the manufacturer's instructions.

- Anthracite
- Semi-anthracite
- Gas
- Low volatile steam coal

The comprehensive list of authorised fuels can be found at www.gov.uk

To help you make the perfect choice we have put together an easy to read table on page 105 to enable you to compare the features and specifications of each stove. The Gallery collection allows you to choose from a range of authentic fireplace chambers & hearths, timeless period combination casts, solid fuel and gas stoves, inset gas fires & decorative baskets. All this together with your fireplace accessory needs, allowing you to create that perfect focal point to your living space. Don't forget, your retailer is on hand with helpful advice to assist you with your decision.

CLASSIC GAS BLACK STOVE | PERSIAN GREY LIMESTONE BROMPTON MANTEL | STAGGERED GREY WHITE CHAMBER | PORCELAIN SLATE TILED HEARTH

Eco

DESIGN
STOVES

Ecodesign Ready Stoves in accordance with the Government's clean air strategy are designed to reduce emissions by burning wood more efficiently taking into account the long term environmental impact of the appliance during its whole lifecycle.

Only appliances that have been tested and verified as meeting these new limits will be able to be sold and installed legally within the UK.

The emission limits include those for Particulate Matter (PM), Organic Gaseous Compounds (OGC), Carbon Monoxide (CO) and Nitrogen Oxides (NOx).

SIA Ecodesign Ready stoves will meet the new regulation which will come into force on the 1st January 2022 and we are delighted to have introduced a selection of Ecodesign ready stoves to the Gallery Collection, pledging our support to a greener sustainable future in order to further reduce the impact of climate change.

FIREFOX 8 ECO

TIGER ECO

CLASSIC 8 ECO WARM WHITE

CLASSIC 8 ECO BLACK

Whilst we continue to develop new and enhanced products to improve efficiency and clean burning, it is the critical issue of wood fuel that plays the biggest role in the air quality solution. A stove is only as good as the wood it burns.

Burning wet wood is inefficient as it demands a lot of heat to vaporise the water before the appliance can give out the proper level of heat to the room, hot water or heating systems. In turn, this creates a lot of smoke which damages the chimney blackens the appliance and contributes to air pollution. Dry wood that has been properly sourced and seasoned means it produces fewer particulates, more heat efficiency and less maintenance. Chimneys are less likely to block and will remain easier to sweep.

The government-backed Ready to Burn scheme is compliant with EU timber regulations and will set a benchmark for logs and other wood fuels in the UK to help with identifying wood that has been carefully chosen and ready to burn.

For more details and to find your nearest stockist visit www.woodsurre.co.uk/are-you-ready-to-burn/

Glass and Granite Hearths

These high quality glass & granite hearths are a contemporary alternative to complement any multifuel or wood burning stove.

The glass hearths are constructed from 12mm toughened glass and are available in smoked or transparent glass. The granite hearths are constructed from 20mm natural black granite and are available honed or polished. There are four shapes available to choose from:

SQUARE

SEMI CIRCLE

TRUNCATED

TEARDROP

CIRCULAR*

QUADRANT*

*Available in glass only

Made to Measure Farmhouse Hearth

Inspired by country style decor and living, this textured limestone with its appearance of slate is warm and cosy in appearance but strong and robust in character. Honed with chiselled edges, it is blue grey in colour and looks rustic and antique in appearance. Strive to create something a little more interesting! When it comes to the layout of your hearth, you can get much more striking design with these modular multi sized pieces enabling you to produce a modular design to your specifications. With a variety of different size options for front and back hearths to suit most fireplace requirements, it's a fantastic alternative to traditional granite or slate.

All Farmhouse products are sold as individual components. Your retailer will be able to advise what best suits your requirements.

Technical INFORMATION

DETERMINE YOUR *Chimney*

The Chimney or flue in your house will normally determine what kind of fire you will choose.

STEP ONE

Identify which type of chimney you have or whether you have no chimney using the information below.

Commonly in older houses, earlier than 1960. The Class 1 chimney is identifiable by 7" (180mm) or greater diameter flue. The existing chimney must be structurally sound, please check before the installation of a new fireplace.

CLASS 1 CHIMNEY

Either an older house where the existing chimney has been lined by a proprietary steel flue or a newer house with a steel flue built in. This chimney type is identifiable by a 5" (130 mm) diameter flue and a steel flue terminal.

CLASS 2 CHIMNEY

Modern houses generally later than 1960 often have a pre-cast concrete chimney system, identifiable by a rectangular box section flue and a terminal, as illustrated in the picture above.

PRE-CAST FLUE

Modern houses often have no chimney. You can use a modern decorative electric fire, either with no heat for aesthetics or an efficient fire with up to 2kW heat output.

NO CHIMNEY

STEP TWO

Now you know what type of chimney you have (or if you have no chimney) you can decide on the type of fire and preferred source of fuel. Ensure that the fire can be matched with a suitable suite combination.

- ***** Can be installed to a twin wall flue system

Please note, this information is provided as a guide. Please check the appliance instructions for details of the installation requirements.

Fire TYPES

The Gallery Collection offers a choice of gas or electric appliances to suit almost every chimney flue type. Below is an explanation of how each of these engines differ from one another. Please see the table below for an overview of their key features.

HIGH EFFICIENCY
GLASS FRONTED

Featuring a glass fronted, full depth ceramic coal fuel bed, these engines are the most efficient of all fire types. A Class 2 slimline version also is available for Gallery fires.

CLASS 1 OPEN
FRONTED CONVECTOR

A full depth fire suitable for Class 1 chimneys. Convector fires offer greater efficiency ratings than standard open fronted fires. Manual or slide control options available.

CLASS 2 OPEN
FRONTED CONVECTOR

This fire type has the same features as the Class 1 version but with a reduced depth to suit a Class 2 chimney type. This is normally indicated by a more shallow fuel bed.

DECORATIVE
GAS FIRE

A full depth fire suitable for Class 1 chimneys. The key difference with this type of fire is that it does not feature a canopy and produces radiant heat only.

INSET ELECTRIC
FLAME EFFECT FIRE

Introducing the NEW Gallery inset electric fire featuring our latest innovative multi-colour way flame technology. This versatile fire has an impressive range of up to 2kW heat output and is available with a range of contemporary and traditional trims to choose from.

TECHNICAL FRAME, TRIM & FRET INFORMATION

The table below explains which frames, fire frames, trims and frets are available for each particular fire.

* Only wood and smokeless fuels may be used in clean burn mode

** Depth includes rear flue diverter box.

*** Required with additional PDQ adapter if fitting with a flue liner.

**** 100mm - when fitted into a shed, inland marine craft or other buildings for occasional use. 125mm - when fitted into a standard brick built property.

***** Concentric Flue

STOVE CARE

It is your responsibility to burn the correct fuels at all times, more importantly if you live in a smoke controlled area. High temperature burning fuels can cause damage to your stove and the environment. For guidance on the best fuels to use please refer to the recommendations of the Solid Fuel Association www.solidfuel.co.uk and always use approved fuel, in accordance with the manufacture's instructions.

No responsibility can be accepted if high temperature fuels have been used or if the draught reading on the appliance is not in accordance with the manufactures instructions, current standards and building regulations. For the future longevity of your grate, clean the ash away regularly as a build-up beneath the fire will cause the grate to burn out quickly. The grate is a consumable part of your fire and will need replacement from time to time, depending on the frequency, fuel used and burning temperature of your fire.

Most stoves have a riddling grate mechanism to ease de-ashing. Always ensure that ash is removed from your stove (once cooled) regularly. When a build-up of ash occurs, this will affect the life of the consumable parts. Gallery stoves (excluding gas) utilize an 'air wash' system which helps to keep the large viewing glass clean during operation and improve efficiency.

All Gallery stoves are manufactured from cast iron and it is vital that appliances undergo a period of 'burning in'. This involves small fires initially and then gradually increasing in size with each firing. If this process is adhered to then you should experience years of trouble free and enjoyable use.

All Gallery stoves are CE approved to EN13240 and are suitable for use with a variety of fuels such as wood, coal, coke, peat, anthracite or smokeless fuels. This does not include house coal due to the volatile temperatures.

For safety, all Gallery solid fuel stoves are supplied with a heat resistant glove, it is always advisable to use this glove when operating the stove as it will become extremely hot during use.

Stove DIMENSIONS

All dimensions are in mm. Due to manufacturing processes, all measurements are approximate and may vary slightly. Please allow for a tolerance of plus or minus 12mm.

The Firefox 5 Gas, Firefox 8 Gas, Tiger gas, Tiger Inset, Tiger cub and Helios Inset stoves are all top flue only. All other stoves have the option of top or rear flue.

*G refers to the rebate measurement (distance from wall to the back of the inside leg return)

DIAGRAM D

Notes

All dimensions are provided (all in mm) as a guide only and are subject to a tolerance of ± 12 mm. It is normal for tiles to craze over time. Most fires have a remote control option, please ask your retailer.

All products (except chrome finishes and Efficiency Plus fires) are suitable for burning solid fuel, however polished and highlighted products may tarnish. Only burn small fires to start with in order to temper the cast iron.

Before committing to a fireplace, please discuss your particular installation with your retailer who will provide expert advice and carry out a survey.

*Standard Cartmel & Durrington 48 suites come with 3" rebate. Models with feature spot lights come with 1" rebate.

*G refers to the rebate measurement (distance from wall to the back of the inside leg return)

Notes

1. Portuguese Limestone models come with Three-piece back panels
2. The Clifton, Durrington 42 and the Cranbourne models come supplied with three-piece panels in all materials
3. All suites in Chiltern and Cotswold finish can be ordered with single piece back panels or three-piece back panels (except Clifton Cranbourne, and Durrington 42 - see note 2)

AFTERCARE &

Maintenance

Cast Iron

All the cast iron products are delivered with a protective, oil-based coating on polished surfaces. This should be cleaned off during the installation. It is recommended that a spray-type oil is applied from time to time in order to avoid surface rust appearing. Ensure that the room in which the cast iron product is being installed is thoroughly dry. For example recently plastered walls cause high levels of moisture in the atmosphere and, as a result, rust is likely to occur. Under no circumstances should a water-based cleaner or polish be used to clean cast iron products.

It is your responsibility to burn smoke free fuels if you live in a smoke free zone. There are some very high temperature burning fuels which can cause damage to any fireplace. Please refer to the Solid Fuel Association (www.solidfuel.co.uk) recommendations and use an approved coal merchant as your supplier.

No responsibility can be accepted if high temperature fuels have been used or if there is excessive draft. If in doubt we recommend the use of a clay fire back. Clean ash away regularly as a build up beneath the fire will cause the grate to burn out quickly. The grate is a consumable part of your fire and will need replacement from time to time, depending on the frequency and burning temperature of your fires.

Ceramic FUEL BEDS

When using ceramic fuel beds, ensure that these do not touch any of the polished surfaces in order to minimise the risk of thermal discolouration. The ceramic black and graphite products are coated with a high temperature paint and during their natural burning lifecycle eventually the paint can burn off, exposing the raw material. To restore the finish a proprietary, high temperature paint can be used to re-coat the product and this paint is available from your local retailer.

Limestone

Limestone is a naturally porous sedimentary rock, therefore it is important not to spill any liquid types especially liquids of colour as these can often leave a prominent stain. In the event of a spillage, our best advice would be to contact our technical team for guidance. In the event of any damage occurring by way of a chip or a minor scratch then a fine wet and dry sand paper can be applied with care in order to achieve the best results.

Limestone products, once installed and dry should be cleaned and sealed where necessary using Gallery Collection aftercare products. Your installer should carry out the initial sealing where applicable.

The stone mantels pictured are manufactured from 100% natural material. As such the mantel you will purchase will be unique due to the inevitable variations in fossil formation, veining and colour. This is one of the great attractions of 100% pure natural products. Please be aware that small fossils and variations in the limestone are part and parcel

Marble

Marble & Micro Marble has a surface that is extremely durable however liquids which have a strong acidic content for example citrus juices may attack and discolour the surface therefore care must be taken with any spillages of this nature. In order to maintain its subtle shine and appearance, occasionally spray with a general household polish and buff with a soft dry cloth. Do not use any bleach or abrasive cleaning agents, as these could damage the surface or dull the appearance of the material.

Granite

Marble and granite hearths are a beautiful investment and as such require regular maintenance and care to continue looking its best. Care must be taken when lighting candles to avoid spilling wax on the surface and the hearth must be protected when placing tea lights. Our best advice is to clean up any spillages as soon as they happen, as the porous surface of a granite or marble can mean that stains can happen quickly, therefore it's important to remember to soak up a spill with a clean dry cloth or sponge whenever they happen. By wiping the surface down with a warm damp cloth and then use a soft dry cloth to buff to a shine depending on the finish, when you're tidying your home, will enable you to keep it looking pristine.

Natural Wood & VENEER

When caring for your elegantly crafted wood or wooden veneered mantel and in order to maintain its beautiful appearance, regular cleaning should be completed with a soft cloth using a mild household cleaner or polish. Water and ammonia based cleaners should be avoided, water can sometimes be absorbed into the wood and damage the surface, in some extreme cases this can cause the veneered wood to separate from the surface beyond repair. Ammonia based products can attack the protective lacquered coating and cause a dull cloudy appearance if used, it will also detract from any emphasis on the natural grain of the wood.

Jurastone

Jurastone suites are manufactured from natural stone, the application of the durable paint finish can be textured or smooth, the result of which gives a realistic 'cold to touch' feel of natural stone. Cleaning this product must be done with absolute care, for best results use a clean white damp cloth. Do not press or scrub too hard to avoid damaging the paint finish.

Installation

Your Gallery fireplace is made up of a number of different components and it is important to ensure that your installer has the necessary qualifications and experience to fit ALL the components of a fireplace.

All gallery appliances are supplied with detailed, comprehensive installation and user instructions. All installations must be in accordance with the manufacturer's instructions, current building regulations and subsequent British standards. The installation should only be carried out by a qualified competent persons. For all gas appliances, a Gas Safe registered engineer and for solid fuel, a HETAS registered engineer. Failure to comply with these requirements may render the appliance unsafe in the first instance, impede on the efficiency and serviceability of your appliance and ultimately invalidate any warranty.

All installers in order to satisfy the terms and conditions of our warranty must be registered with the appropriate regulating bodies as deemed by Percy Doughty. All gas installers within the UK must be registered with the Gas Safe Register. In the Republic of Ireland the Board Gais and for solid fuel installations all installers must be registered with HETAS and for Scotland be compliant with the current Technical Handbook – Domestic.

It is important that you retain all documentation following the installation as this will be required in order to activate the warranty if needed. The documentation should be supplied by building control following successful registration of each installation by the installer, for both gas and solid fuel appliances together with any commissioning certificates, benchmarks and service records completed in the rear of the installation manual. It would be the responsibility of the installer to provide all the necessary information, however in some circumstances where documentation is absent then communications with your local building control officer may be beneficial, for solid fuel installations only.

When installing any Granite, Slate or Limestone hearth please ensure the area is flat and free from debris and dust, preferably to be situated on a concrete sub hearth. We would also recommend that the under surface only is primed/sealed with a suitable PVA glue or equivalent and left to dry sufficiently, prior to bedding down. The hearth would then need to be bedded down on a strong sand and cement bed with a medium consistency, taking into account the need to fill any voids, spaces and support points to accommodate the safe functioning of the whole installation when completed. We would also advise that when installing the mantel, always prime and seal the under surface that will come into contact with any adhesive or water based mixes. Failure to adhere to the advice given may result in moisture patches appearing that may stain and damage the material, these effects may be irreversible and render the installation unfit for purpose.

Marble, micromarble and jurastone are not suitable for solid fuel applications. The colours shown in this brochure are as accurate as possible. If the colour you require is critical then please consult your retailer before making your decision.

When you are identifying your chimney please see page 105 in the brochure. If you are not clear please consult your HETAS or Gas Safe Registered (Board Gais in Republic of Ireland) installer or your approved stockist.

Gas fires within The Gallery Collection with a gas input of 6.9kW or less do not normally require additional ventilation, however there are some circumstances where additional ventilation may be required. This would be determined by your installer when completing a survey before installation. For appliances with an input of 6.9kw or over, please ask your retailer for further information on the additional ventilation requirements.

When fitting a decorative gas fire within a basket the manufacturer's instructions and current British standard BS 5871 Part 3, must be followed, and in doing so a risk assessment must be completed by the installer to ensure that a sufficient gap is provided around the basket when placed inside the builder's opening or purpose built fire chamber. This is essential for the adequate service and future maintenance of the appliance and also allowing for good access to the controls. It is also important for air flow cooling around the appliance basket, which would also allow for the best possible flame picture. It is also an important consideration to ensure the correctly rated materials have been used within the builder's opening or purpose built chamber.

Your new gas appliance will require an annual service and maintenance but not limited to, dependent on use. It is a requirement of the warranty that this is carried out by a qualified competent person registered with the appropriate regulatory body as deemed by Percy Doughty. In doing so will help you enjoy many years of trouble free usage of your appliance.

- All cast iron products are manufactured in ISO 9002 accredited manufacturing facilities.
- All the gas fires we supply are tested in accordance with CE requirements and are CE marked.
- All measurements are approximate and may vary slightly so allow for a tolerance of plus or minus 12mm.
- To achieve some of the colour options, we plate the products using a variety of manufacturing processes. "Antique Brass finish" or "Chrome finish" are not brass or chrome.

All the images throughout this brochure are for illustrative purposes only and are as accurate as possible. Some natural materials may vary due to the nature of the products, but if the colour you require is critical then please consult your retailer before basing all your decisions on the colours shown here.

Some room sets may appear not to comply with the requirements of the latest building regulations, we would always advise that you check your proposal with your approved fitter before proceeding with any project.

Please also note that shading and crazing are characteristics of the glazed tiles used in tiled inserts and tiled hearths.

There are occasions when designs, or products are altered or discontinued without prior notice (a reserved right), so if you are about to set your heart on a particular fireplace, please consult your retailer before making that final commitment.

All installations must be carried out in accordance with the requirements set out in the Building Regulation.

Your Gallery fireplace is made up of a number of different components and it is important to ensure that your installer not only meets the requirements above, but that they also have the necessary experience to fit ALL those components, for example a Jurastone suite with a fire frame.

Before committing to a fireplace, please discuss your particular installation with your retailer who will provide expert advice and carry out a survey.

DISCLAIMER

We reserve the right to change or withdraw details, prices or specifications without prior notice. Every effort has been made to ensure the accuracy of information in this brochure. All dimensions are given for your convenience and should only be used as a guide. Colour reproduction is as accurate as current printing methods allow.
