COMBINING SUPREME CRAFTSMANSHIP, QUALITY MATERIALS, AND ELEGANCE.

The Gallery Collection presents an extensive range of traditional and contemporary fireplaces and stoves. Built on 75 years of experience in the fireplace industry, we combine supreme craftsmanship, quality materials and elegance in design.

Our desire is to provide you with a superb choice of fireplaces skilfully made with high quality materials, all fitted in your home by reputable retailers so you can enjoy the experience of buying and owning your own individual fireplace.

The fireplace suites and fires within the collection represent classic fireplace designs, some infused with a contemporary twist, aimed to complement a variety of interior styles. Many designs are available in a variety of stone finishes including Portuguese limestone, natural marble, micro marble, and granite all capable of combining with our extensive range of gas and electric fires, casts, baskets and stoves.

The Gallery Collection offers a unique selection of natural stone mantels and quality cast iron fireplace options including inserts, fascias and fire baskets, as well as a wide selection of more traditional cast iron combination fireplaces. Our range will allow you to burn a variety of fuels. There is something for everyone and even the choice to install one of our realistic electric fires.

The Gallery Collection features a range of stoves suitable for many scenarios and fuel types. Our multifuel stoves are fully CE/UKCA approved and clearSkies certified to the 2022 Ecodesign emissions and efficiency standards.

STOVES

The Gallery Collection presents an extensive range of traditional and contemporary stoves, combining supreme craftsmanship, quality materials and elegance in design. There's nothing quite like the feeling invoked by the comforting glow and warmth of a cast iron stove. Our desire is to provide you with a superb choice of high performance, efficient stoves that are skilfully made with high quality materials.

There are many factors and considerations that will determine which stove is ideally suited to take pride and place in your home. Featured within this brochure are a range of stoves suitable for many build applications, with a host of fuel options, including wood, gas, electric or multifuel.

A multifuel stove has many similar characteristics to a wood-burning stove in appearance and design. Multifuel, in essence, refers to the burning capability of the stove, therefore the permitted fuels you are able to use would include wood, smokeless coal, wood pellets or peat. Burning house coal is not permitted and could cause damage to your appliance due to the higher temperature of which it burns. You must only use the types of fuel that the manufacturer says can be used in the appliance, this information can be found in the manufacturers instructions.

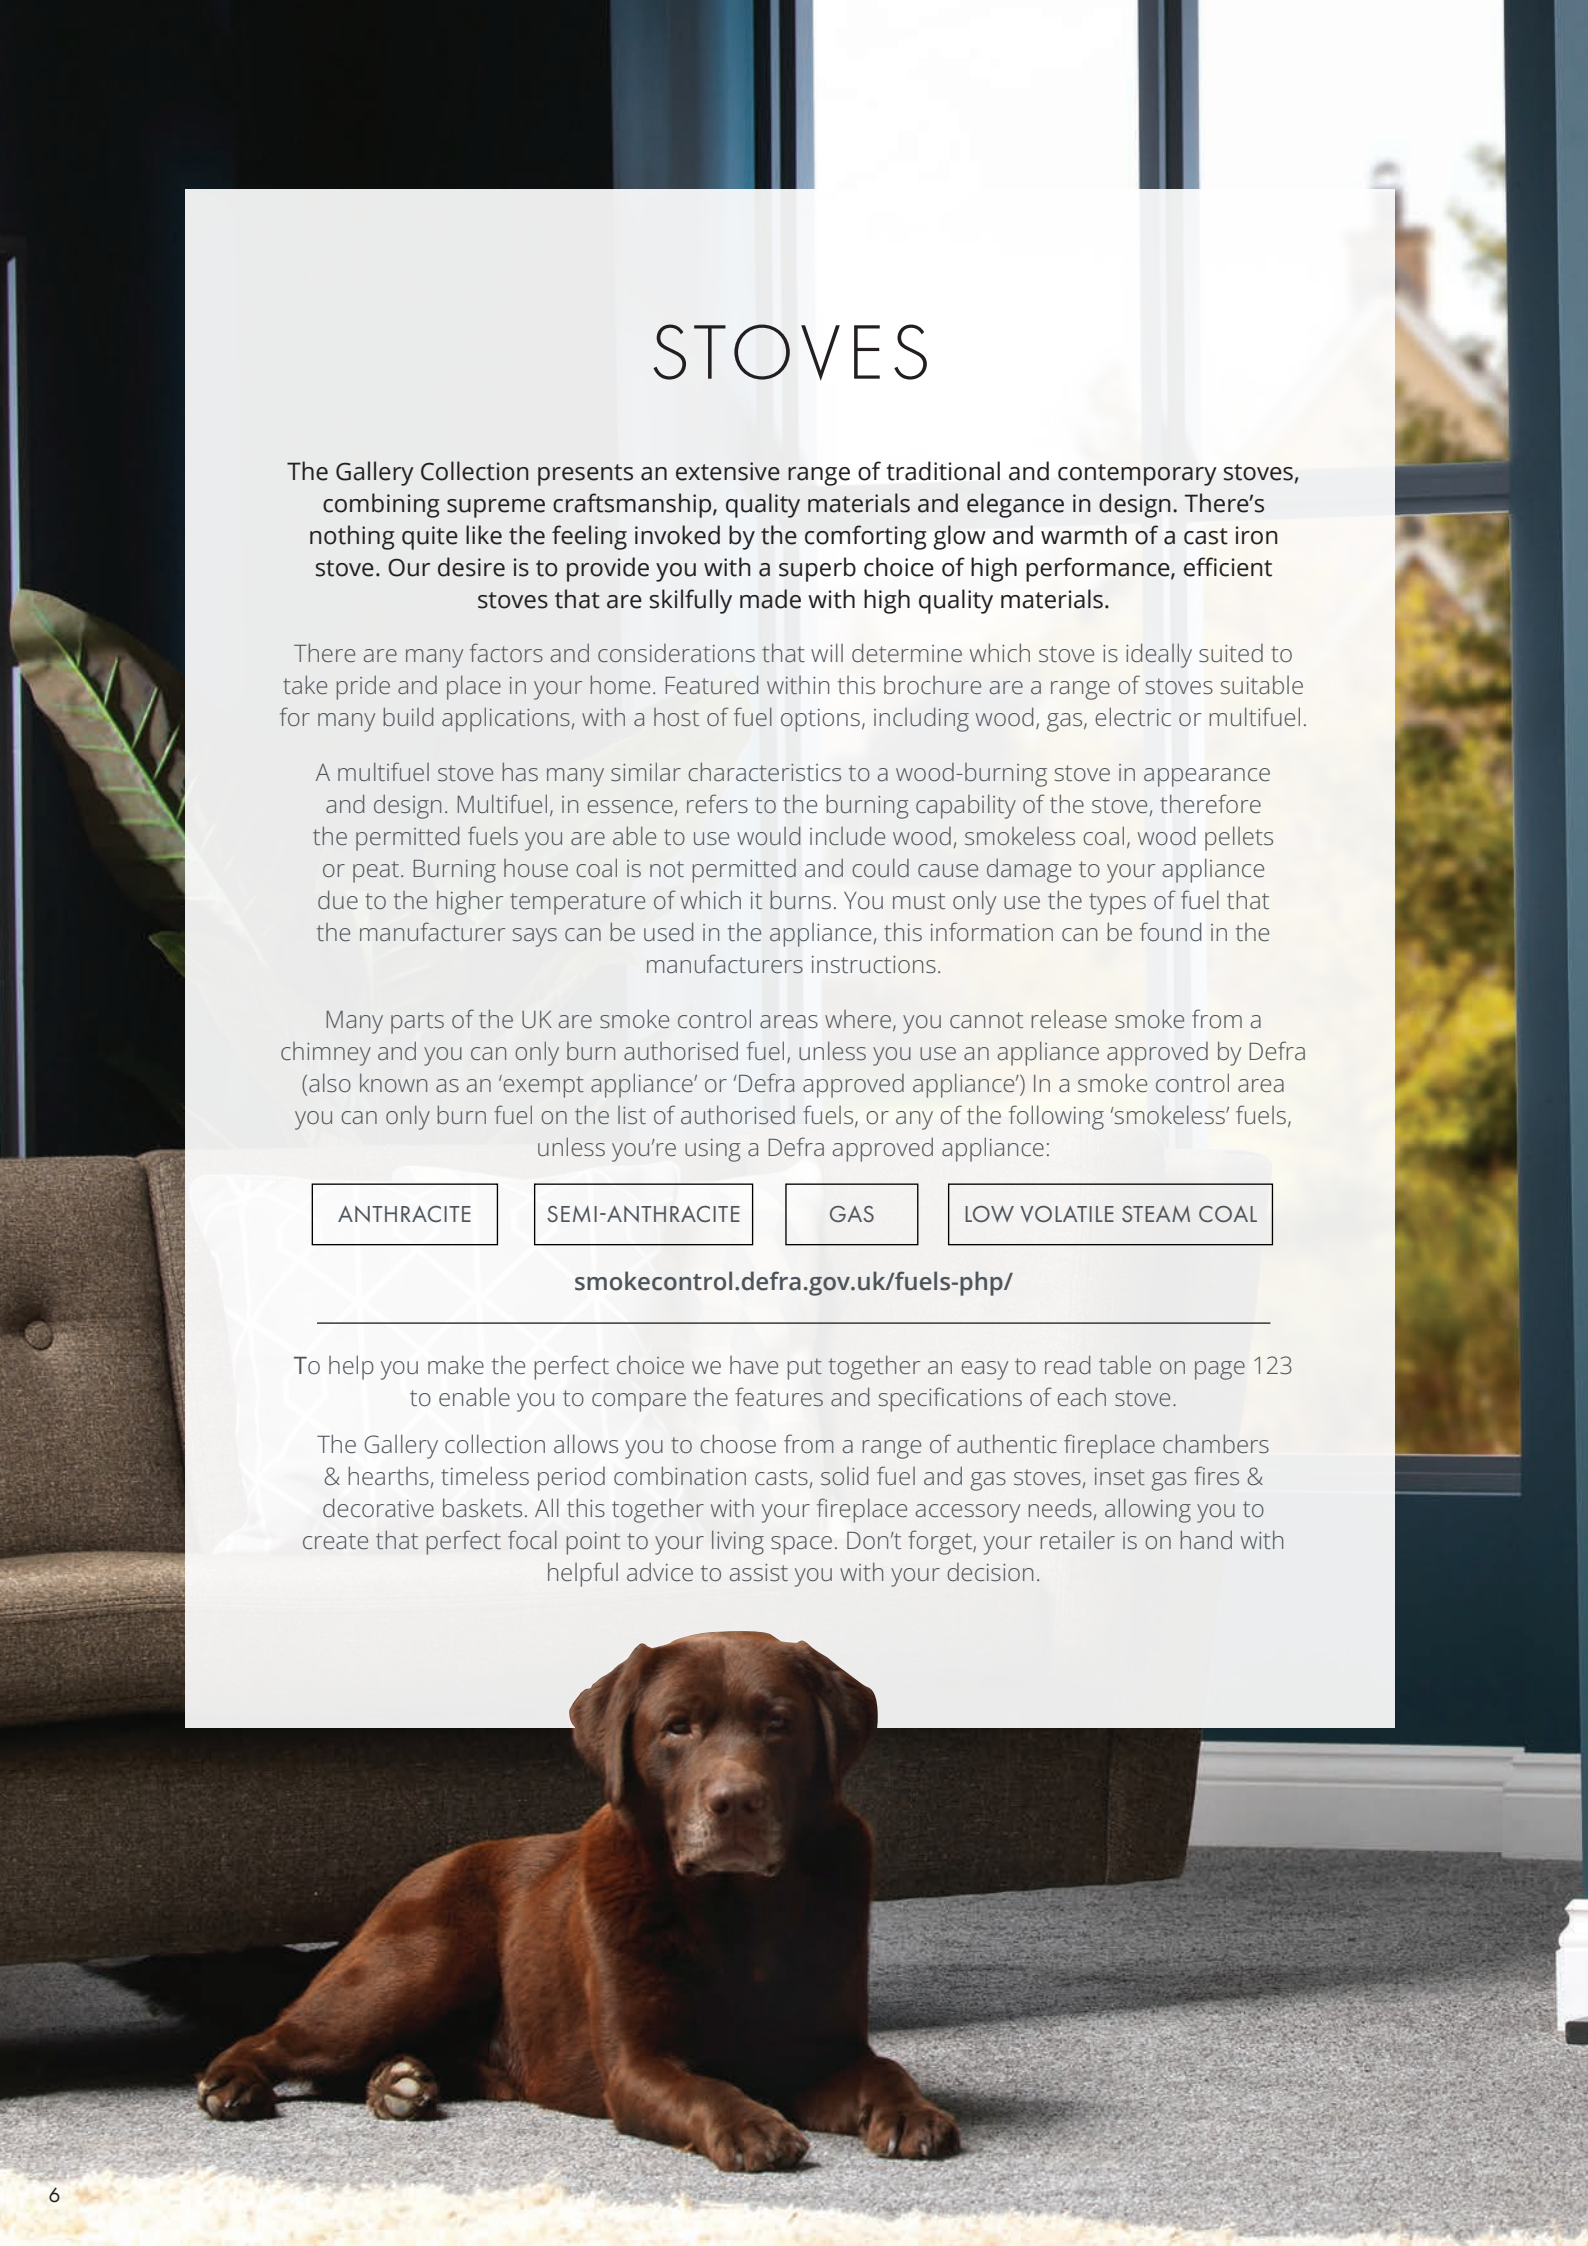

Many parts of the UK are smoke control areas where, you cannot release smoke from a chimney and you can only burn authorised fuel, unless you use an appliance approved by Defra (also known as an 'exempt appliance' or 'Defra approved appliance') In a smoke control area you can only burn fuel on the list of authorised fuels, or any of the following 'smokeless' fuels, unless you're using a Defra approved appliance:

ANTHRACITE	SEMI-ANTHRACITE	GAS	LOW VOLATILE STEAM COAL

smokecontrol.defra.gov.uk/fuels-php/

To help you make the perfect choice we have put together an easy to read table on page 123 to enable you to compare the features and specifications of each stove.

The Gallery collection allows you to choose from a range of authentic fireplace chambers & hearths, timeless period combination casts, solid fuel and gas stoves, inset gas fires & decorative baskets. All this together with your fireplace accessory needs, allowing you to create that perfect focal point to your living space. Don't forget, your retailer is on hand with helpful advice to assist you with your decision.

BURNING CLEANER, BURNING SMARTER

ECODESIGN STOVES

Ecodesign Ready Stoves in accordance with the Governments clean air strategy are designed to reduce emissions by burning wood more efficiently taking into account the long term environmental impact of the appliance during its whole lifecycle.

Only appliances that have been tested and verified as meeting these new limits will be able to be sold and installed legally within the UK.

The emission limits include those for Particulate Matter (PM), Organic Gaseous Compounds (OGC), Carbon Monoxide (CO) and Nitrogen Oxides (NOx).

SIA Ecodesign Ready stoves will meet the new regulation which came into force on the 1st January 2022. All of the stoves featured in the Gallery Collection are Ecodesign ready stoves, pledging our support to a greener sustainable future in order to further reduce the impact of climate change.

READY TO BURN

Whilst we continue to develop new and enhanced products to improve efficiency and clean burning, it is the critical issue of wood fuel that plays the biggest role in the air quality solution. A stove is only as good as the wood it burns.

Burning wet wood is inefficient as it demands a lot of heat to vaporise the water before the appliance can give out the proper level of heat to the room, hot water or heating systems. In turn, this creates a lot of smoke which damages the chimney blackens the appliance and contributes to air pollution. Dry wood that has been properly sourced and seasoned means it produces fewer particulates, more heat efficiency and less maintenance. Chimneys are less likely to block and will remain easier to sweep.

The government-backed Ready to Burn scheme is compliant with EU timber regulations and will set a benchmark for logs and other wood fuels in the UK to help with identifying wood that has been carefully chosen and ready to burn.

For more details and to find your nearest stockist visit:

SOLANO
ELECTRIC STOVE

Using cutting-edge technology and innovation to provide instant heat, realistic flames and adaptive ambience to your living space, bringing you an authentic electric stove experience.

Combining functionality with smart technology to create the ultimate home heating experience, you are in control of every aspect of your appliance, from the speed, colour and brightness of the entrancing flames to the enchanting crackling sounds of burning logs and the complementary ambient lighting of your extended living space.

For an even more authentic finish, upgrade to the Coppice Real Log Set. Handcrafted in the UK using carefully selected natural logs, the realistic, latticed arrangement is complemented by subtle forest-floor embers, adding natural character and individuality to the flame presentation. As each set is crafted from natural materials, subtle variations make every fuel bed unique.

Complete the look with the optional log store, as shown in the image and decorative pipe for a beautifully considered finishing touch.

DECORATIVE FLUE PIPE STOVE UPGRADE

Our decorative stove flue pipe adds the finishing touch to our Solano electric stove. Simply slot together and stand on the top of your electric stove to create an authentic looking fireplace.

FEATURES:

- Easy installation
- 90° bend powder coated robust mild steel
- Comes complete with collar for aesthetics
- Can easily be removed if required for cleaning purposes
- Fits directly on the top of the stove, with magnetic connection to ensure stability
- Suitable for use with electric stoves only

BLACK GLASS LINER STOVE UPGRADE

The Black Glass Liner adds an extra level of style to the interior, creating an elegant focal point that's perfect for all homes. The Black Glass Liner is designed to fit all our compact gas stoves and reflects the flame picture on all sides, enhancing its depth.

FIREPLACE MANTELS

Create a truly individual fireplace with our collection of beautifully crafted mantels, designed to become a striking focal point at the heart of your home.

From clean, understated profiles to more decorative period-inspired designs, the collection offers a variety of styles to complement both traditional and contemporary interiors. Available across a selection of natural stone, marble, painted and cast iron finishes, each mantel brings its own distinctive character to a room.

Designed with versatility in mind, our mantels can be combined with a wide choice of cast iron inserts, fire baskets, stoves, gas and electric fires, allowing you to create a fireplace that reflects your individual style. Whether you prefer classic elegance, architectural detailing or a more contemporary look.

The Gallery Collection offers a mantel to provide the perfect frame for your chosen fireplace.

THE ASQUITH *55*
MANTEL

With its elegant proportions and gently profiled design, the Asquith Mantel in Aegean Limestone creates a striking focal point in any living space. Handcrafted from 100% natural limestone, each mantel is uniquely characterised by subtle variations in veining, fossil formations and natural markings, celebrating the beauty and individuality of this timeless material.

The Asquith's distinctive rounded detailing flows gracefully across the shelf and down the legs, creating a refined profile that blends effortlessly with both contemporary and traditional interiors. Its soft, neutral tones bring warmth and sophistication to a room, while its beautifully balanced proportions make it a natural centrepiece within any fireplace setting.

Whether paired with a cast insert, gas fire or a stove, the Asquith combines exceptional craftsmanship with enduring style, enhancing the character and ambience of your home for years to come.

BROMPTON 51
MANTEL

Inspired by classic Victorian design, the Brompton Mantel in Aegean Limestone brings timeless elegance and natural beauty to any fireplace setting. Handcrafted from 100% natural limestone, each mantel showcases its own unique character through subtle variations in tone, veining and fossil formations, ensuring no two pieces are exactly alike.

With its clean lines, balanced proportions and understated detailing, the Brompton is equally suited to traditional and contemporary interiors. The soft, neutral tones of Aegean Limestone create a versatile backdrop for a wide range of fires and stoves, while the refined design provides a striking focal point that enhances the warmth and character of any room.

The Victorian-inspired styling of the Brompton works in perfect harmony with traditional cast inserts and baskets, yet its simplicity also complements modern fire designs, offering exceptional flexibility. Beautifully crafted and effortlessly elegant, the Brompton remains one of the most popular mantel designs in the Gallery Collection.

BROMPTON 56
MANTEL

Inspired by classic Victorian design, the Brompton 56" Mantel creates a striking focal point within larger living spaces. With its generous proportions, clean lines and timeless styling, this elegant surround effortlessly complements both traditional and contemporary interiors, bringing character and sophistication to any fireplace setting.

Expertly crafted from natural stone, the Brompton is available in Aegean Limestone, Persian Limestone and Kallos Marble, each offering its own unique beauty and distinctive character. Subtle variations in colour, veining and natural markings ensure every mantel is individual, celebrating the craftsmanship and authenticity of the material.

The Victorian-inspired design of the Brompton works in perfect harmony with traditional cast inserts and baskets, while its understated elegance also lends itself beautifully to modern gas fires, electric fires and wood-burning stoves. Its wider 56" mantel shelf makes it particularly well suited to larger chimney breasts and feature walls, creating a truly impressive centrepiece.

Beautifully proportioned and exceptionally versatile, the Brompton 56" combines classic design with enduring appeal, making it one of the most popular mantels in the Gallery Collection.

THE CHISWICK 56
MANTEL

The Chiswick Mantel captures the poise and refinement of Georgian design, bringing a sense of heritage and craftsmanship to the modern home. Distinguished by its decorative roundel corner blocks, elegant mouldings and beautifully balanced proportions, the Chiswick possesses a quiet grandeur that elevates any interior without feeling overly ornate. Crafted from natural Kallos Marble, each mantel features its own unique patterns and markings, ensuring no two are exactly alike.

Rich in character and timeless in appeal, the Chiswick is designed to complement a wide variety of fireplace arrangements and décor styles. Whether paired with a traditional cast insert or a more contemporary fire, its graceful detailing and luxurious marble finish create an atmosphere of sophistication, making it a truly memorable centrepiece for any living space.

THE KINGSTON 56 MANTEL

The Kingston Mantel has a wonderful way of making a room feel instantly more welcoming. Inspired by the warmth and character of period homes, its beautifully carved corbels, generous mantel shelf and elegant proportions create a natural gathering point within the living space. Crafted from luxurious Kallos Marble, each mantel showcases its own unique natural patterning, bringing individuality and charm to every installation.

Designed to complement a wide range of fireplace styles, the Kingston pairs effortlessly with cast iron inserts, stoves, back panels and inglenook chambers. Whether creating a cosy, traditional setting or adding character to a more contemporary interior, this distinctive mantel offers a harmonious balance of comfort, craftsmanship and timeless appeal.

PALMERSTON 54 CAST IRON MANTEL

Bold, distinctive and rich in character, the Palmerston Cast Iron Mantel creates an impressive focal point within any living space. Featuring a substantial chunky mantel shelf and a recessed curved square arch, its striking design showcases the enduring beauty of traditional cast iron craftsmanship while adding depth and presence to the fireplace.

Finished in classic black, the Palmerston draws inspiration from elegant Victorian styling, blending robust construction with refined detailing. Traditionally paired with cast iron inserts and baskets, it also provides a stunning setting for wood-burning and multifuel stoves, making it a versatile choice for both period properties and contemporary homes.

With its timeless design, exceptional durability and commanding presence, the Palmerston is the perfect choice for homeowners looking to create a fireplace that combines classic character with lasting style.

THE RICHMOND 54
MANTEL

The Richmond Mantel has all the qualities of a fireplace that feels instantly at home. With its elegant corbels, beautifully balanced proportions and timeless styling, it creates a natural focal point where family and friends can gather, bringing warmth, character and a welcoming atmosphere to any living space. Inspired by traditional fireplace design, the Richmond offers a reassuring sense of familiarity while retaining a refined and sophisticated appearance.

Available in Aegean Limestone and Kallos Marble, the Richmond showcases the individuality and beauty of natural materials, ensuring each mantel is unique. Equally suited to cast iron inserts, stoves, back panels and inglenook settings, it provides a versatile foundation for creating a fireplace tailored to your home. Rich in detail yet effortlessly inviting, the Richmond is a design that will be enjoyed and admired for years to come.

FIREPLACE SUITES

The Gallery Collection presents an extensive range of traditional and contemporary stoves, combining supreme craftsmanship, quality materials and elegance in design. There's nothing quite like the feeling invoked by the comforting glow and warmth of a cast iron stove. Our desire is to provide you with a superb choice of high performance, efficient stoves that are skilfully made with high quality materials.

When planning your fireplace, the Gallery Collection has a variety of materials to choose from, depending on what look you are trying to achieve.

All the suites work in combination with our extensive range of fires including our higher performing gas fires range. The collection also includes a large range of gas and electric fires.

We hope this wide choice will allow you to select the perfect fireplace to suit your own particular taste. We have pictured each suite design in a variety of options to demonstrate some of the many different combinations that can be achieved. A suite consists of the mantel, back panel and hearth.

Most suites in this brochure (except the models fitted with feature lighting) can be fitted against a flat wall without a chimney, if chosen with a suitable electric fire. All that is required is a power point. We have generally shown the suites with gas and electric fire options.

PICTURE SHOWN WITH:

Bauhaus Gas Fire in chrome finish available separately

THE CARTMEL 48
FIREPLACE SUITE

The Cartmel Fireplace Suite is a beautifully balanced design that brings understated elegance to both contemporary and classic interiors. Defined by its graceful arched opening and clean, refined lines, the Cartmel creates a welcoming centrepiece, offering timeless appeal that complements a wide range of décor styles.

Available in luxurious Arctic White Micro Marble or Portuguese Limestone, the Cartmel Fireplace Suite exudes quality and craftsmanship. Complete with a matching back panel and hearth, it provides the perfect setting for your chosen fire, transforming any living space into a warm and inviting retreat. Combining sophisticated styling with enduring appeal, the Cartmel is a statement piece designed to be enjoyed for years to come.

THE CONISTON 54
FIREPLACE SUITE

The Coniston Fireplace Suite draws inspiration from classic architectural design, combining a beautifully carved arch with crisp chamfered detailing to create a look that feels both timeless and effortlessly refined.

Crafted from natural Portuguese Limestone, its soft, inviting tones and unique fossil characteristics bring depth, warmth and individuality to the heart of the home.

Supplied complete with a matching back panel and hearth, the Coniston is designed to frame your chosen fire with elegance and poise.

For greater flexibility, the Coniston can also be installed as a 54" mantel without the back panel. Its balanced proportions and distinctive craftsmanship allow it to complement a wide variety of interiors, from character properties to modern living spaces.

PICTURE SHOWN WITH:

*Suitable for solid fuel use. Please be aware that the porous nature of the material means some staining or discolouration may occur.

THE CRANBOURNE 44
FIREPLACE SUITE

The Cranbourne Fireplace Suite is a masterclass in understated design, offering a refined blend of simplicity, proportion and craftsmanship. Featuring elegant stepped detailing across the legs and mantel, its architectural styling creates a sense of depth and sophistication, making it a natural choice for interiors that favour timeless elegance over unnecessary embellishment.

The Cranbourne in Portuguese Limestone brings warmth and character through its beautifully textured finish and subtle natural tones. Designed to pair effortlessly with a wide range of gas and electric fires, the suite provides a versatile foundation for creating a welcoming living space.

Quietly confident in its appearance, the Cranbourne delivers a lasting sense of style that feels both contemporary and enduring.

THE DACRE 54
FIREPLACE SUITE

The Dacre Fireplace Suite is inspired by the idea that the fireplace should be the heart of the home. Its sweeping arched opening and softly sculpted stonework create a feeling of warmth and familiarity, bringing a relaxed elegance to the room. Beautifully proportioned and effortlessly timeless, the Dacre offers a comforting presence that invites you to slow down and enjoy the space around it.

The Dacre in Portuguese Limestone celebrates the natural beauty and character of stone, with subtle variations that make each suite unique. Whether paired with a gas or electric fire, it creates a cosy and welcoming setting, blending classic charm with enduring quality to become a cherished feature of the home for years to come.

THE DURRINGTON 48
FIREPLACE SUITE

The Durrington Fireplace Suite embraces contemporary living with its clean geometry, understated styling and versatile design. Whether finished in Portuguese Limestone, New Arctic White or Jurastone, the Durrington brings a fresh, uncluttered aesthetic to the room, creating a stylish backdrop that complements modern interiors with ease.

Designed with flexibility in mind, the Durrington can be installed with or without the mantel shelf, allowing you to tailor the look from classic to distinctly contemporary. Complete with a matching back panel and hearth, and compatible with a wide range of gas and electric fires, it offers a sophisticated foundation for creating a warm and inviting living space. Optional downlights add an extra layer of ambience, softly illuminating the fireplace and enhancing its architectural appeal.

CAST IRON INSERTS

A cast iron insert is a decorative plate with complementary front bars that can incorporate an appliance should you so wish, or can be left purely as a decorative feature.

Cast iron inserts are typically in the design of an arch or a vertically tiled section either side of the opening. They are also compatible with several fuel types, including wood, coal, gas or electric. Except for the higher performing range and any chrome finishes, all of the inserts featured in this brochure are suitable for burning multiple fuels, for example wood and coal (for occasional use), however polished and highlighted products may tarnish. When burning solid fuel, it is recommended that you choose a black finish, for more information on each of our inserts, available finishes and fuel suitability see the table on page 119.

PICTURE SHOWN WITH:

HIGHER PERFORMING
CAST IRON INSERTS

The Gallery Collection proudly features a range of higher performing cast iron inserts.

These design-led fireplaces have taken the styling of the traditional insert and combined it with modern, patented gas fires to produce one of the most authentic looking products of its type currently available. Each insert style comes with the option of 3 different fire types to suit most chimney scenarios and features efficiencies of up to 74%.

TILED CAST INSERTS

Create a stunning period style feature in your home with one of our tiled inserts.
Perfect for any home whether you have a traditional Victorian property or simply want to recreate that aesthetic in a more modern home.

Our tiled inserts are made from high quality cast iron, and are fitted into a fire mantel or existing fireplace. Our cast iron tiled fireplaces are compatible with various fuel sources including gas, solid fuel and electric fire options. We also offer a range of fireplace tiles to accompany your tiled insert, please see following page 119 for details.

FIREPLACE COMBINATIONS

As the name suggests, a combination fireplace is a cast iron centrepiece that combines many aspects of a traditional fireplace in one package. All you need to choose is your preferred fuel type and add a hearth.

All combination models have the option of solid fuel or gas, but we also offer the option of electric fires in selected models.

As with other cast iron products, all are suitable for burning solid fuel, however polished and highlighted products may tarnish. When burning solid fuel it is recommended that you choose a black finish. For more information on each of our combination fireplaces, finishes and fuel suitability see the table on page 119.

INSET ELECTRIC FIRES

PICTURE SHOWN WITH:

Durrington 48 fireplace suite

Hopton Electric Fire in black finish

Our collection of electric fires combines cutting-edge flame technology with effortless convenience, delivering a captivating focal point for any home. Featuring innovative multi-colour flame and ember bed effects, these versatile appliances allow you to tailor the ambience to suit your mood, whether you prefer a cosy, traditional glow or a more contemporary statement. With a heat output of up to 2kW and a choice of stylish trims, they provide the perfect balance of performance and design.

Supplied with four interchangeable fuel beds including logs, coals, pebbles and crystals, each fire can be easily customised to complement changing tastes and interiors.

FEATURES:

- Multi-colour flame and fuel bed technology
- Up to 2kW heat output
- Choice of contemporary and traditional trim options
- Four interchangeable fuel beds: logs, coals, pebbles and crystals
- Infrared remote control with LCD display
- Thermostatic temperature control
- Independent flame effect operation
- Fully programmable 7-day timer
- UK designed and ERP compliant
- Adjustable flame and ember bed colours

FASCIA & INSERTS

PICTURE SHOWN WITH:

Monroe Fascia in highlight finish

Dacre 54 fireplace suite in Portuguese limestone

Clevedon gas fire in polished finish

Combining traditional fireplace styling with modern heating flexibility, our collection of Cast Iron Fascias and Inserts offers an elegant way to create the look and character of a classic fireplace. Beautifully crafted and available in a range of designs and finishes, these versatile models provide a timeless focal point for both traditional and contemporary interiors.

Designed to work with a variety of heating options, fascias and inserts can be paired with gas, electric or high-efficiency inset gas fires, allowing you to achieve the perfect balance of style, warmth and performance. For those seeking a more traditional fireside experience, selected models can also be installed for solid fuel use when combined with a clay back, finishing trim and fret.

Whether chosen to frame a contemporary appliance or recreate the charm of a period fireplace, our fascias and inserts offer exceptional versatility, blending classic cast iron craftsmanship with modern convenience.

Available in a range of styles and finishes, including popular designs such as the Hamilton and Monroe.

FIRE BASKETS

A fire basket is a timeless way to bring character and atmosphere to any fireplace, offering a beautiful focal point that complements both traditional and contemporary interiors. Available in solid fuel, gas and electric options, our collection provides the flexibility to create the perfect fireplace setting while retaining the authentic charm of a classic open fire.

All of our fire baskets are suitable for solid fuel use; however, for regular burning of wood or coal, a black finish is recommended, as polished and highlighted finishes may naturally tarnish over time. To complete your installation, most fireplace configurations will also require a chamber, slip set and back panel. Our extensive collection includes a variety of styles, materials and finishes, making it easy to create a fireplace that perfectly suits your home and personal taste.

STOVE CHAMBERS & TILES

Our extensive range of UK-manufactured stove chambers and tiles provides a simple, efficient and cost-effective way to create the perfect fireplace setting. Designed to complement both traditional and contemporary interiors, they offer an attractive and practical solution for enhancing your stove installation.

Available in a variety of finishes and materials, including natural stone, ceramic and real brick-effect designs, our chambers allow you to tailor the look of your fireplace to suit your individual style. Whether you're creating a classic inglenook feel or a sleek modern feature, there's a chamber option to bring your vision to life.

Combining quality craftsmanship with easy installation, our chamber collection is designed to add character, depth and visual impact, transforming any stove into a stunning focal point within the home.

FARMHOUSE HEARTHS

Inspired by country style decor and living, this textured limestone with its appearance of slate is warm and cosy in appearance but strong and robust in character. Honed with chiselled edges, it is blue grey in colour and looks rustic and antique in appearance. Strive to create something a little more interesting!

When it comes to the layout of your hearth, you can create a much more striking design with these modular multi sized pieces enabling you to produce a modular design to your specifications. With a variety of different size options for front and back hearths to suit most fireplace requirements, it's a fantastic alternative to traditional granite or slate.

All Farmhouse products are sold as individual components.
Your retailer will be able to advise what best suits your requirements.

ATLAS TILED BACK AND HEARTH SET

The Atlas set offers a sophisticated blend of function and flair, designed to enhance any interior while complementing a wide range of stove installations. Available in a handpicked selection of premium tile finishes, each set is framed with a sleek, high-gloss trim that adds a contemporary edge to your fireplace.

Once installed, due to the integrated air vents, it allows for circulation and sufficient air for cooling, ensuring safe operation, making it as practical as it is visually striking. Whether undertaking a renovation or installing a new appliance, the Atlas set delivers a seamless experience with the following key benefits:

DIY FRIENDLY
Designed for ease of installation, enabling a professional finish

CLEAN & HASSLE-FREE
No mortar, no mess, and no disruption to your home environment

QUICK & RELIABLE
A secure two-screw fixing system ensures stability and precision with minimal effort

COST EFFECTIVE
Achieve a premium aesthetic while significantly reducing installation costs

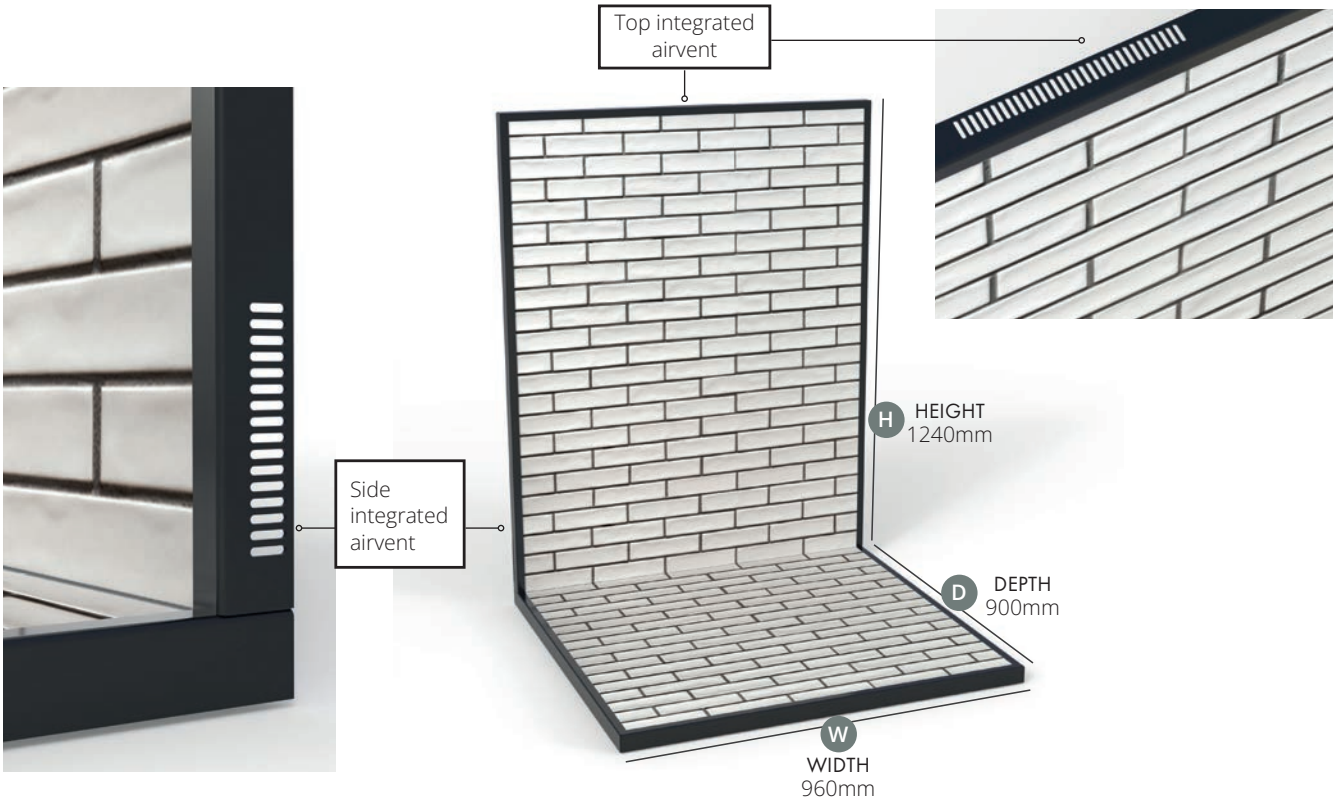

SAFE & COMPLIANT
The dynamics of the integrated air vents allow for cooling when the appliance is in operation

DURABLE & ROBUST
Constructed from high-quality materials to withstand heat and everyday wear

WIDE STYLE RANGE
Available in ten distinctive styles to suit both traditional and contemporary décor

LOW MAINTENANCE
Easy to clean and maintain

Elevate your stove with the tiled back and hearth set.

The Atlas set is more than a fireplace solution. It is a statement of quality, efficiency, and timeless design.

FIREPLACE BEAMS

Add warmth, character and architectural interest to your fireplace with our collection of Fireplace Beams. Available in a choice of natural and man-made materials, these beautifully crafted beams provide the perfect finishing touch to both traditional and contemporary fireplace installations.

Our highly realistic oak-effect beams are available in Light Oak and Dark Oak finishes, faithfully capturing the texture, grain and appearance of natural timber. Offered in 48" and 54" sizes, with optional integrated downlights, they provide a stylish and practical feature above your fireplace.

Lightweight yet incredibly durable, our oak-effect beams are moulded from natural oak and manufactured using advanced materials composed of natural inorganic minerals. This non-toxic, non-combustible construction offers many advantages over traditional wooden beams, delivering the authentic look of timber with enhanced durability and safety.

Whether you're creating a rustic inglenook fireplace or a sleek modern focal point, our beam collection offers the perfect combination of style, practicality and lasting appeal.

Please note that beam colours and finishes shown within this brochure are for illustrative purposes only. As each beam is individually hand-finished, natural variations in colour, shading and texture are to be expected, enhancing the unique character of every piece.

TECHNICAL INFORMATION

Behind every Gallery Collection product is a dedicated team of technical specialists with a combined 165 years of experience within the gas and solid fuel industry. From product development and testing to installation guidance and chimney system solutions, our experienced team provides expert support at every stage of a project.

Whether you require advice on product specifications, fireplace design, flue requirements or replacement parts, our technical experts are on hand to deliver practical, knowledgeable assistance. Working closely with retailers, installers and customers alike, they help ensure every installation achieves the highest standards of performance, safety and reliability.

Committed to continuous innovation and exceptional customer support, our technical team is a trusted resource for everything from routine queries to complex installation requirements.

DETERMINE YOUR CHIMNEY

The chimney or flue in your house will normally determine what kind of fire you will choose.

STEP ONE

Identify which type of chimney you have or whether you have no chimney using the information below.

CLASS 1 CHIMNEY:

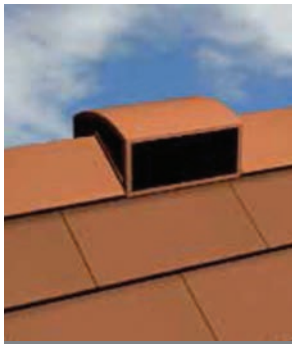

Commonly in older houses, earlier than 1960. The Class 1 chimney is identifiable by 7" (180mm) or greater diameter flue. The existing chimney must be structurally sound, please check before the installation of a new fireplace.

CLASS 2 CHIMNEY:

Either an older house where the existing chimney has been lined by a proprietary steel flue or a newer house with a steel flue built in. This chimney type is identifiable by a 5" (130 mm) diameter flue and a steel flue terminal.

PRE-CAST FLUE:

Modern houses generally later than 1960 often have a pre-cast concrete chimney system, identifiable by a rectangular box section flue and a terminal, as illustrated in the picture above.

NO CHIMNEY:

Modern houses often have no chimney. You can use a modern decorative electric fire, either with no heat for aesthetics or an efficient fire with up to 2kW heat output.

STEP TWO

Now you know what type of chimney you have (or if you have no chimney) you can decide on the type of fire and preferred source of fuel. Ensure that the fire can be matched with a suitable suite combination.

**** Selected products available in balanced flue options
***** Can be installed to a twin wall flue system

Please note, this information is provided as a guide. Please check the appliance instructions for details of the installation requirements.

FIRE TYPES

The Gallery Collection offers a choice of gas or electric appliances to suit almost every chimney flue type. Below is an explanation of how each of these engines differ from one another. Please see the table below for an overview of their key features.

HIGH EFFICIENCY GLASS FRONTED

Featuring a glass fronted, full depth ceramic coal fuel bed, these engines are the most efficient of all fire types.

CLASS 1 OPEN FRONTED CONVECTOR

A full depth fire suitable for Class 1 chimneys. Convector fires offer greater efficiency ratings than standard open fronted fires. Manual or slide control options available.

DECORATIVE GAS FIRE

A full depth fire suitable for Class 1 chimneys. The key difference with this type of fire is that it does not feature a canopy and produces radiant heat only.

INSET ELECTRIC FLAME EFFECT FIRE

The inset electric fire features our latest innovative multi-colour way flame technology. This versatile fire has an impressive range of up to 2kW heat output and is available with a range of contemporary and traditional trims to choose from.

NOTES

All dimensions are provided in mm as a guide only and are subject to a tolerance of ± 12mm.

It is normal for tiles to craze over time.

Most fires have a remote control option, please ask your retailer.

All products (except chrome finishes and Efficiency Plus fires) are suitable for burning solid fuel, however polished and highlighted products may tarnish. Only burn small fires to start with in order to temper the cast iron.

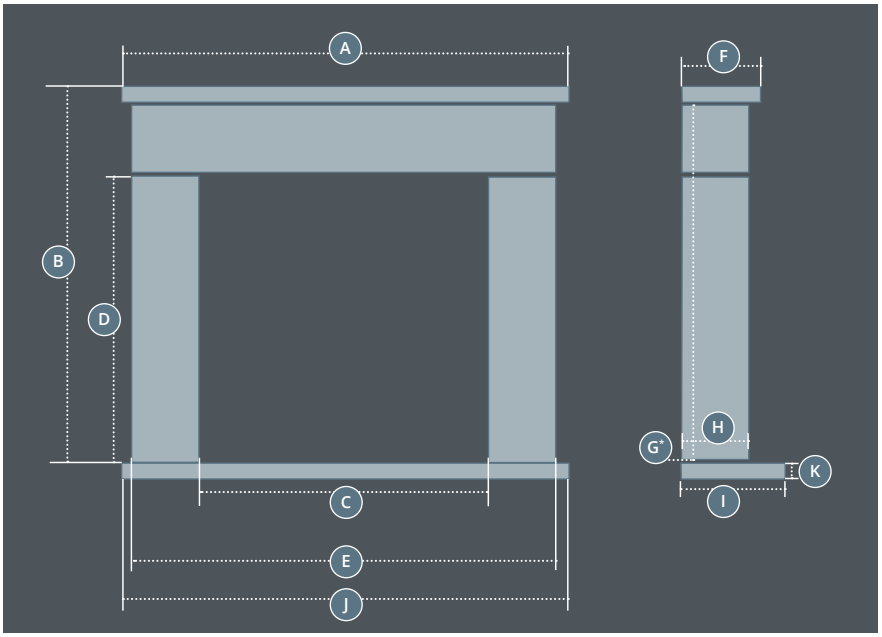

Before committing to a fireplace, please discuss your particular installation with your retailer who will provide expert advice and carry out a survey.

*G refers to the rebate measurement (distance from wall to the back of the inside leg return).

STOVE CARE

It is your responsibility to burn the correct fuels at all times, more importantly if you live in a smoke controlled area. High temperature burning fuels can cause damage to your stove and the environment. For guidance on the best fuels to use please refer to the recommendations of the Solid Fuel Association www.solidfuel.co.uk and always use approved fuel, in accordance with the manufacturer's instructions.

No responsibility can be accepted if high temperature fuels have been used or if the draught reading on the appliance is not in accordance with the manufacturer's instructions, current standards and building regulations. For the future longevity of your grate, clean the ash away regularly as a build-up beneath the fire will cause the grate to burn out quickly. The grate is a consumable part of your fire and will need replacement from time to time, depending on the frequency, fuel used and burning temperature of your fire.

Most stoves have a riddling grate mechanism to ease de-ashing. Always ensure that ash is removed from your stove (once cooled) regularly. When a build-up of ash occurs, this will affect the life of the consumable parts. Gallery stoves (excluding gas) utilise an 'airwash' system which helps to keep the large viewing glass clean during operation and improve efficiency.

To ensure optimum performance and longevity, all Gallery stoves should undergo a careful "burning in period" before regular use. Begin with a series of small fires, gradually increasing their size over the first few firings. This important process allows for high temperature paint finish to cure naturally, this also helps to prevent thermal stress and ensures that the stove performs as intended. Taking the time to burn in your stove correctly will help provide years of reliable warmth and enjoyment.

All Gallery stoves have been independently tested and approved accordance with EN 13240 and are suitable for use with a range of approved solid fuels, including seasoned wood, smokeless fuels, Pet coke, anthracite, peat briquettes, where specified in the appliance instructions. House coal is not recommended and should not be used, as its high volatile content can generate excessive combustion temperatures, potentially resulting in over firing and damage to the appliance.

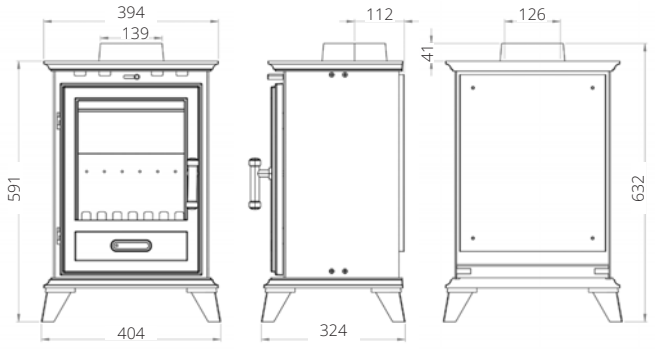

STOVE DIMENSIONS

All dimensions are in mm. Due to manufacturing processes, all measurements are approximate and may vary slightly. Please allow for a tolerance of plus or minus 12mm.

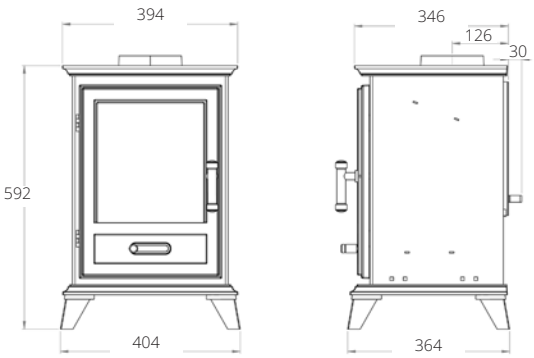

Please see the table on page 117 for installation details in relation to the flue configuration of our stoves, specifically in relation to top and rear flue outlets. The Tiger Gas and Firefox 8 Gas models have a 150mm flue collar but require a 125mm flue. The collar should be packed with rope/fire cement or sleeved with a 6" vitreous pipe to finish.

It is essential that your stove is installed in accordance with Building Regulations and any other standard requirements by a competent person with experience in fitting fireplaces - your retailer will be able to help you select an appropriately qualified installer.

AFTERCARE AND MAINTENANCE

CAST IRON

All the cast iron products are delivered with a protective, oil-based coating on polished surfaces. This should be cleaned off during the installation. It is recommended that a spray-type oil is applied from time to time in order to avoid surface rust appearing. Ensure that the room in which the cast iron product is being installed is thoroughly dry. For example recently plastered walls cause high levels of moisture in the atmosphere and, as a result, rust is likely to occur. Under no circumstances should a water-based cleaner or polish be used to clean cast iron products.

It is your responsibility to burn smoke free fuels if you live in a smoke free zone. There are some very high temperature burning fuels which can cause damage to any fireplace. Please refer to the Solid Fuel Association (www.solidfuel.co.uk) recommendations and use an approved coal merchant as your supplier.

No responsibility can be accepted if high temperature fuels have been used or if there is excessive draught. If in doubt we recommend the use of a clay fire back. Clean ash away regularly as a build up beneath the fire will cause the grate to burn out quickly. The grate is a consumable part of your fire and will need replacement from time to time, depending on the frequency and burning temperature of your fires.

CERAMIC FUEL BEDS

When using ceramic fuel beds, ensure that these do not touch any of the polished surfaces in order to minimise the risk of thermal discolouration. The ceramic black and graphite products are coated with a high temperature paint and during their natural burning lifecycle eventually the paint can burn off, exposing the raw material.

To restore the finish a proprietary, high temperature paint can be used to re-coat the product and this paint is available from your local retailer.

MICRO MARBLE

Micro Marble has a surface that is extremely durable however liquids which have a strong acidic content for example citrus juices may attack and discolour the surface therefore care must be taken with any spillages of this nature. In order to maintain its subtle shine and appearance, occasionally spray with a general household polish and buff with a soft dry cloth. Do not use any bleach or abrasive cleaning agents, as these could damage the surface or dull the appearance of the material.

LIMESTONE

Limestone is a naturally porous sedimentary rock, therefore it is important not to spill any liquid types especially liquids of colour as these can often leave a prominent stain. In the event of a spillage, our best advice would be to contact our technical team for guidance. In the event of any damage occurring by way of a chip or a minor scratch then a fine wet and dry sandpaper can be applied with care in order to achieve the best results.

Limestone products, once installed and dry should be cleaned and sealed where necessary using Gallery Collection aftercare products. Your installer should carry out the initial sealing where applicable.

The stone mantels pictured are manufactured from 100% natural material. As such the mantel you will purchase will be unique due to the inevitable variations in fossil formation, veining and colour. This is one of the great attractions of 100% pure natural products. Please be aware that small fossils and variations in the limestone are part and parcel.

MARBLE

Marble hearths are a beautiful investment and as such require regular maintenance and care to continue looking its best. Care must be taken when lighting candles to avoid spilling wax on the surface and the hearth must be protected when placing tea lights. Our best advice is to clean up any spillages as soon as they happen, as the porous surface of granite or marble can mean that stains can happen quickly, therefore it's important to remember to soak up a spill with a clean dry cloth or sponge whenever they happen. By wiping the surface down with a warm damp cloth and then using a soft dry cloth to buff to a shine depending on the finish, when you're tidying your home, will enable you to keep it looking pristine.

PAINTED MANTELS

When caring for your elegantly crafted painted mantel and in order to maintain its beautiful appearance, regular cleaning should be completed with a soft cloth using a mild household cleaner or polish. Water and ammonia-based cleaners should be avoided, water can sometimes be absorbed which can damage the surface. Ammonia based products can attack the protective lacquered coating and cause a dull cloudy appearance if used.

INSTALLATION

Your Gallery fireplace is made up of a number of different components and it is important to ensure that your installer has the necessary qualifications and experience to fit ALL the components of a fireplace.

All Gallery appliances are supplied with detailed, comprehensive installation and user instructions. All installations must be in accordance with the manufacturer's instructions, current building regulations and subsequent British standards. The installation should only be carried out by a qualified competent persons. For all gas appliances, a Gas Safe registered engineer and for solid fuel, a HETAS registered engineer. Failure to comply with these requirements may render the appliance unsafe in the first instance, impede on the efficiency and serviceability of your appliance and ultimately invalidate any warranty.

All installers in order to satisfy the terms and conditions of our warranty must be registered with the appropriate regulating bodies as deemed by Percy Doughty. All gas installers within the UK must be registered with the Gas Safe Register. In the Republic of Ireland the Bord Gais and for solid fuel installations all installers must be registered with HETAS and for Scotland be compliant with the current Technical Handbook – Domestic.

It is important that you retain all documentation following the installation as this will be required in order to activate the warranty if needed. The documentation should be supplied by building control following successful registration of each installation by the installer, for both gas and solid fuel appliances together with any commissioning certificates, benchmarks and service records completed in the rear of the installation manual. It would be the responsibility of the installer to provide all the necessary information, however in some circumstances where documentation is absent then communications with your local building control officer may be beneficial, for solid fuel installations only.

When installing any Granite, Slate or Limestone hearth please ensure the area is flat and free from debris and dust, preferably to be situated on a concrete sub hearth. We would also recommend that the under surface only is primed/sealed with a suitable PVA glue or equivalent and left to dry sufficiently, prior to bedding down. The hearth would then need to be bedded down on a strong sand and cement bed with a medium consistency, taking into account the need to fill any voids, spaces and support points to accommodate the safe functioning of the whole installation when completed. We would also advise that when installing the mantel, always prime and seal the under surface that will come into contact with any adhesive or water based mixes. Failure to adhere to the advice given may result in moisture patches appearing that may stain and damage the material, these effects may be irreversible and render the installation unfit for purpose.

Marble and micro marble are not suitable for solid fuel applications. The colours shown in this brochure are as accurate as possible. If the colour you require is critical then please consult your retailer before making your decision.

When you are identifying your chimney please see page 117 in the brochure. If you are not clear please consult your HETAS or Gas Safe Registered (Bord Gais in Republic of Ireland) installer or your approved stockist.

Gas fires within The Gallery Collection with a gas input of 6.9kW or less do not normally require additional ventilation, however there are some circumstances where additional ventilation may be required. This would be determined by your installer when completing a survey before installation. For appliances with an input of 6.9kW or over, please ask your retailer for further information on the additional ventilation requirements.

When fitting a decorative gas fire within a basket the manufacturer's instructions and current British standard BS 5871 Part 3, must be followed, and in doing so a risk assessment must be completed by the installer to ensure that a sufficient gap is provided around the basket when placed inside the builders opening or purpose built fire chamber. This is essential for the adequate service and future maintenance of the appliance and also allowing for good access to the controls. It is also important for air flow cooling around the appliance basket, which would also allow for the best possible flame picture. It is also an important consideration to ensure the correctly rated materials have been used within the builders opening or purpose built chamber.

Your new gas appliance will require an annual service and maintenance but not limited to, dependent on use. It is a requirement of the warranty that this is carried out by a qualified competent person registered with the appropriate regulatory body as deemed by Percy Doughty. In doing so will help you enjoy many years of trouble free usage of your appliance.

All cast iron products are manufactured in ISO 9002 accredited manufacturing facilities.

All the gas fires we supply are tested in accordance with CE requirements and are CE marked.

All measurements are approximate and may vary slightly so allow for a tolerance of plus or minus 12mm.

To achieve some of the colour options, we plate the products using a variety of manufacturing processes. "Antique Brass finish" or "Chrome finish" are not brass or chrome.

CLEANING

When cleaning the outer body of your gas/wood burning or multifuel stove, we do not recommend the use of any sprayed cleaning products, including water. We also do not recommend the use of a wet/damp cloth or rag to wipe away dust or ash, as this can also cause small areas of corrosion and rusting formations. Care should also be taken not to have any over-spray on the body of the stove, when cleaning the glass with any spray glass cleaner product

Unfortunately, rust and corrosion can sometimes happen when the stove is not used frequently, continuously exposed to water, moisture and oxygen combined. In all instances this natural process of oxidation can occur with all ferrous metal stoves. When dusting and removing settlements of ash, we would only recommend the use of a soft bristle brush, or a dry microfibre cloth is used to keep the stove looking in the best possible condition. If marks are left from deposits of ash, then the Gallery black grate polish can be applied to restore the area to its natural state.

GENERAL

All the images throughout this brochure are for illustrative purposes only and are as accurate as possible. Some natural materials may vary due to the nature of the products, but if the colour you require is critical then please consult your retailer before basing all your decisions on the colours shown here.

Some room sets may appear not to comply with the requirements of the latest building regulations, we would always advise that you check your proposal with your approved fitter before proceeding with any project.

Please also note that shading and crazing are characteristics of the glazed tiles used in tiled inserts and tiled hearths.

There are occasions when designs, or products are altered or discontinued without prior notice (a reserved right), so if you are about to set your heart on a particular fireplace, please consult your retailer before making that final commitment.

All installations must be carried out in accordance with the requirements set out in the Building Regulations.

Your Gallery fireplace is made up of a number of different components and it is important to ensure that your installer not only meets the requirements above, but that they also have the necessary experience to fit ALL those components.

Before committing to a fireplace, please discuss your particular installation with your retailer who will provide expert advice and carry out a survey.

DISCLAIMER

We reserve the right to change or withdraw details, prices or specifications without prior notice. Every effort has been made to ensure the accuracy of information in this brochure. All dimensions are given for your convenience and should only be used as a guide. Colour reproduction is as accurate as current printing methods allow. We cannot be held responsible for changes or matters outside our control.
